

Introducing Dispill® Multi-dose Packaging

.....

A safer, easier way for patients  
to take medication

## Improve medication adherence

Dispill® is ideal for patients with multi-dose requirements. The blister cells can hold up to 31 days of morning, noon, evening and bedtime doses and feature a printed label with personalized instructions. This helps give your highest-risk patients a way to ensure they are taking the right medication and the right dose at the right time.

## Maintain quality of life

Dispill® eliminates the need for pillboxes and single-dose bingo cards, which in turn decreases the risk of patients mixing up medication or forgetting the time of day they have to take them. And, each cell is perforated, making it easy to take them on the go. Giving patients a safer, easier way to take their medications correctly is a convenience that helps them maintain their quality of life — a benefit that will keep them healthy and independent as long as possible.

## Easily monitor and assist patients

The convenient blister-cell design lets you see whether your patients have taken their medications at a glance. And, it provides a complete medication list for quick reference when communicating with loved ones, doctors or pharmacists regarding your patients' care.

## Key benefits of Dispill®

- Improve medication adherence with detachable, individual blister packs
- Eliminate the need for pillboxes or single-dose bingo cards
- Easily monitor and assist patients at a glance with customized labels featuring dosage information and medication list
- Blister cells can hold up to 31 days of morning, noon, evening and bedtime doses
- Perforated blister packs allow for specific intake times or taking medications on the go

Tell your patients about the Dispill®  
Multi-dose Packaging solution.
